

PRACTICAL 7

AIM: Designing the module using Object Oriented approach including Use case Diagram with scenarios, Class Diagram and State Diagram, Collaboration Diagram, Sequence Diagram and Activity Diagram.

Project Title: GSRTC (Gujarat State Road Transport Corporation)

Class Diagram: A Class diagram which is a type of static structure diagram that describes the structure of a system by showing the system's classes, their attributes, operations (or methods), and the relationships among objects.

Use Case Diagram: A use case diagram is a graphical depiction of a user's possible interactions with a system. A use case diagram shows various use cases and different types of users the system has and will often be accompanied by other types of diagrams as well. The use cases are represented by either circles or ellipses.

State Diagram: A state diagram is a type of diagram used in computer science and related fields to describe the behavior of systems. State diagrams require that the system described is composed of a finite number of states; sometimes, this is indeed the case, while at other times this is a reasonable abstraction.

Activity Diagram: Activity diagrams show the flow of one activity to another within a system or process. Even complex systems can be visualized using activity diagrams. They are used within organizations to model customer journeys, to show the process of receiving an order through shipping to the customer, and to model sales processes.
